

The LUIS Team as your service provider

The best and most efficient
solution for you

› SOLUTION PROVIDER

Together with the camera and monitor systems,
we focus on providing you with a comprehensive solution.

› SUPPORT

Our support team always offers you the best possible
assistance during system commissioning, portal
administration and product inquiries.

› INSTALLATION

Our service technicians travel across Europe to
carry out installations, test installations, training, and
consultations on-site. To best address the various
usage conditions and vehicles, each installation is indi-
vidually coordinated with you in advance.

LUIS SMART PREVENT

Prevention through
intelligent risk analysis

Functionality

Recognizing dangers to prevent accidents

› Real-time person detection

The intelligent AI camera identifies people and potential dangers within the detection area.

› Automatic alarm triggering

An alarm image and video, along with location data, are immediately and automatically created and transmitted to the LUIS portal.

› Heatmap generation

A heatmap is created from the collected data, serving as a visual hotspot analysis. This helps identify risk zones and supports preventive measures.

Image and video analysis

LUIS SMART PREVENT provides precise image and video documentation for effective tracking

› Detailed data collection

Dangers are documented with images, videos, GPS location and speed in a heatmap.

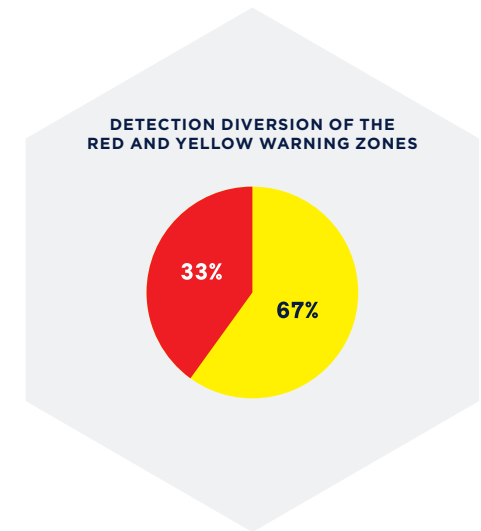

› Immediate access

Alarm images and videos are available immediately.

› Remote access

Optional live views, downloads and remote access to the device enable flexible use.

Use your data to not only recognize dangers, but also to understand them. By taking targeted action, you increase the safety of your fleet.

Analysis options

Making safety measurable

› Data-based risk analysis

Alarms are evaluated daily, weekly or monthly and can be individually filtered for specific vehicles or the entire fleet.

› Targeted prevention

Risk zones, trends, and their causes are detected early so that the right measures can be developed on a solid basis.

› Measurable effectiveness

KPIs enable continuous monitoring of the success of your safety strategy.
